

LED Strip Light Bars and Aluminum Tracks

Environmental Lights now offers bars and tracks with diffusers to protect strips and create softer lighting effects. They come in 98 inch segments and can be cut to any length. Clear track covers are also available for applications requiring maximum brightness and both options can be ordered with or without flanges. Light bars mount conveniently with metal clips and can seal with rubber end caps for a finished look and waterproof assembly. The plastic light bars are flexible enough to follow gradual curves. Aluminum tracks provide the added benefit of conducting heat away from the strips.

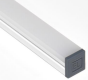

Features

- Light bars are available for 8mm and 10mm wide LED strips. Aluminum track can hold either width.
- Beautiful diffuser effect gives super bright LED strips a soft, alluring glow.
- Rubber end caps for light bars can be sealed with glue to make bars waterproof.
✂ 10mm rubber end caps with wire holes are designed for 2 wires and may be opened up to fit 4 wires for color changing strips.
- Light bars can install with mounting clips or slide into aluminum track (8mm only).
- Snap on covers available for aluminum track in clear and milky diffuser, with or without flanges to cover installation channel.

Applications

- Restaurants, bars, clubs, homes, steps, theaters and entertainment centers.
- Visible installations where the strip lighting is exposed.
- Exterior installations exposed to elements.

<u>Description</u>	<u>Part Number</u>
 LED Strip Light Bars for 8mm Strip	
LED Strip Light Bar for 8mm Strip, 98 inches	led-strip-light-bar-8
LED Strip Light Bar End Cap (8mm)	led-strip-light-bar-end-8
