

AV Control System Integration Maps

Updated September 22nd, 2023

The logo for Environmental Lights is presented within a green rectangular box that has a diagonal cut-off at the bottom right corner. The text "Environmental" is on the top line and "Lights" is on the bottom line, both in white. A small trademark symbol (TM) is positioned to the upper right of the word "Lights".

*See Drivers and Setup Notes for commissioning tips.

Zigbee Network

Wall Dimmers/Switches

- Adaptive Phase Dimmer
- Forward Phase Dimmer
- 0-10v Dimmer
- Keypad Dimmer
- Switch

IP Network

Centralized Lighting

- C4-DIN-8TV-E [0-10v module]
- C4-DIN-8DIM-E-V2 [Adaptive Phase module]

IP Network

DMX Controlled Lighting

- CRE-EDIDIO-10-xx-xx [DMX module]
- *ONLY available direct from Control4

DMX Decoder & Power Supply

DMX

Single Color LED Strip Lights or Neon

Tunable White LED Strip Lights or Neon

Color Changing LED Strip Lights or Neon

Residential Downlights:

- Monochrome
- Tunable White

Commercial Downlights:

- Monochrome
- Tunable White
- RGBW

Drivers and Setup Notes – Dimmers, Switches and Centralized Lighting

Wall Dimmers/Switches and Centralized Lighting:

1. Add Drivers - For each C4 dimmer/switch add the C4 driver to the appropriate room. All drivers will come from My Drivers in Composer and will match the Control4 naming convention of their Switches, Dimmers and Keypad Dimmers.
2. Set Low-End Trim - In order to provide your customer with a full dimming range, you will need to set the “Min On” percentage in the Dimmer Properties within System Design. The goal is for this to be the lowest level where you can see the lights turn on.

NOTE: It is normal for this to range between 0 and 50%.

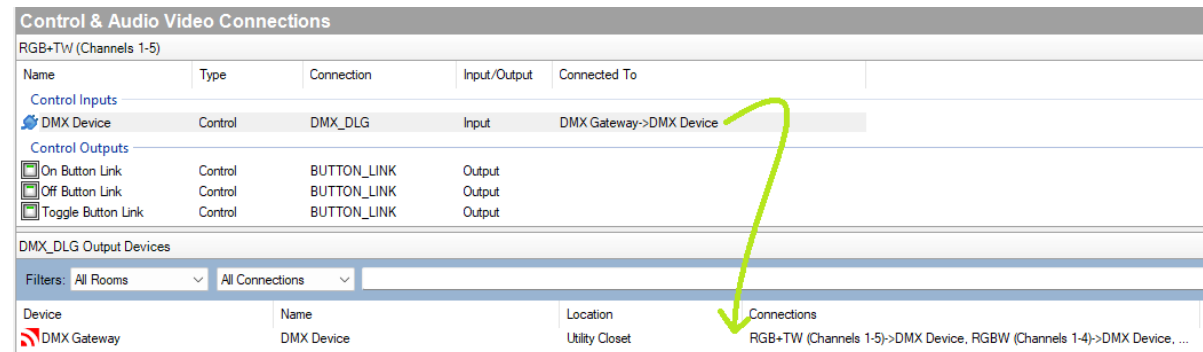

Properties		
Dimmer Information		
Defaults Brightness/Color		
Default On Brightness	<input type="text" value="100"/>	0-100%
Click Rates		
Ramp Up	<input type="text" value="0.250"/>	Seconds
Ramp Down	<input type="text" value="0.750"/>	Seconds
Hold Ramp Rates		
Up	<input type="text" value="5"/>	Seconds
Down	<input type="text" value="5"/>	Seconds
Range Levels		
Min On	<input type="text" value="37"/>	1-100%
Max On	<input type="text" value="100"/>	1-100%
Cold Start Values		
Time	<input type="text" value="0"/>	Milliseconds
Level	<input type="text" value="0"/>	0-100%

Drivers and Setup Notes – Adding DMX Drivers

1. Adding Drivers and making Connections:

- a) You will need to add one driver for the DMX Dimming Module (CRE-EDIDIO-10-xx-xx) that will typically be located in the utility or control closet next to the main control unit.
 - a) Driver name: “Creative Lighting eDIDIO DMX/DALI” by Creative Lighting
- b) For each independently controlled light (single color, tunable white, RGB, RGBW or RGB+TW) you will need to add a DMX driver from C4 to the appropriate room.
 - a) Driver name: DMX Light Driver (OS 3.3.0+) by Control4
- c) Make your Connections! In Connections, connect each DMX light driver to the eDIDIO DMX/DALI module by dragging and dropping onto the module. This needs to be done for each DMX controlled light.

Setting up each light in the Advanced Properties of each load within System Design:

1. Set the Light Source to Custom
2. Designate the Mode:
 - Single Color → EL LED Strip or REVI Downlights
 - TW – 2 Ch. → EL LED Strip or REVI Downlights
 - TW – 3 Ch. → N/A
 - RGB → EL LED Strip
 - RGBW → EL LED Strip
 - RGB+TW → EL LED Strip
3. Designate the DMX Channels
4. Set the Warm and Cold Color Temperatures (for Tunable White and RGB+TW only):

Advanced Properties

Properties	Actions	Documentation	Lua
Log Level	5 - Trace		
Log Mode	Off		
Driver Status	OK		
Gateway Line	1		
Light Source	Custom		
Mode	<div>Single Channel Single Channel Tunable White - 2 Channels (Warm and Cool White) Tunable White - 3 Channels (Warm, Neutral and Cool White) RGB RGBW RGB + Tunable White</div>		
DMX Channels			
Red Channel	1		
Green Channel	2		
Blue Channel	3		
Warm White Channel	4		
Cold White Channel	5		
Master Dimming	No		
Tunable White Settings			
Color Temperature of Warm White	2700		
Color Temperature of Cold White	6500
