

# MADRIX NEBULA

The flexible pixel tape driver to directly control a wide range of digital LEDs.

Key Features 3rd Edition — 08/2018

The MADRIX® NEBULA directly connects to your LED pixels.

This advanced SPI decoder receives control data over Ethernet network or USB and is built to provide excellent image quality.

## **SPI Converter & Direct Connection**

Directly connect to a wide range of supported LEDs via two 4-pin screw terminals. A signal frequency of up to 24 MHz is available. Supply power over USB or 5 V to 24 V over a 2-pin screw terminal.

#### Art-Net / Streaming ACN / USB

Network data is directly converted to SPI without the need for an additional interface. Reliably distribute data from any compatible software or hardware controller. In addition, simply connect to the MADRIX® Software over USB.

#### **Quality Output Of 8 Universes**

Each device drives up to 1,360 RGB pixels while ensuring responsive delivery of high-quality signals to each individual LED. You can choose the output protocol separately for each of the two ports.

#### Sync Mode & Daisy-Chain Support

MADRIX® Software and hardware allow you to fully synchronize Art-Net data for all ports and across devices to get an optimal image on the LEDs without visual interruptions. 2 Ethernet ports allow linearly daisy-chaining several devices together.

#### **Designed For DIN Rails Or Walls**

Its non-conductive enclosure and standardized design for 35 mm top-hat rails make mounting quick, easy, and safe. 2 extra brackets are provided for optional wall mounting. 9 indicators quickly show the device status with the option to turn them off.

## **Invaluable Features**

The device is ready within seconds after startup. HTP Merging is automatically available for two Ethernet sources. Its firmware is upgradable. Access and change specific device settings using the built-in web configuration page.
